Windows

Note: The following instructions are shown from Windows 8, there may be slight differences on other versions of Windows.
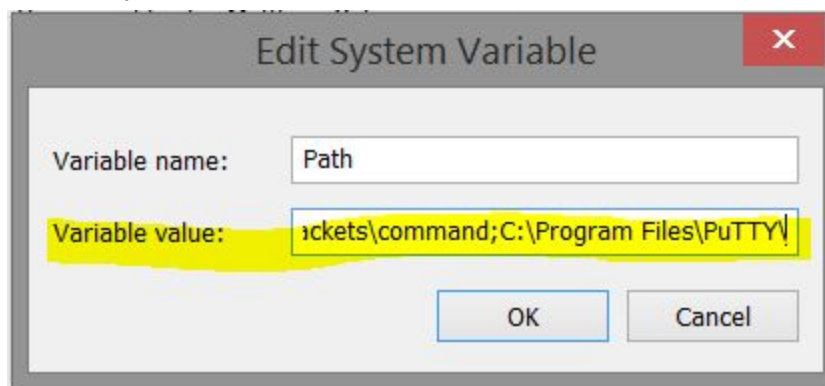

1. Using the Windows button on your keyboard or your screen search "Control Panel"
2. Open the "Control Panel"
3. In the "Control Panel" search for "Environment"
4. Go to "Edit the System Environment Variables"
5. Click "Environment Variables"

6. Find "Path" in your "System Variables"

7. Click on "Path" then click "Edit"
8. In "Edit System Variable" Go to the "Variable Value" box

9. Type the following at the end of that box:
   C:\Python27;C:\Python27\Lib\site-packages\;C:\Python27\Scripts
10. Click "OK" on all of the windows you've opened.
11. Now check that it worked, Open your command prompt.
12. Type "cd\" hit Enter
13. Type "python" hit Enter.
14. Python should open up on your command prompt.
